

# U.S. President's Malaria Initiative

# **PMI/LIBERIA**

## **Background:**

Malaria is endemic in Liberia and transmission occurs year-round within all geographic areas. With the entire population of approximately 4.6 million at risk, malaria is a major health problem in Liberia. Children under the age of five and pregnant women are the most affected groups. The 2013 Health Facility Survey (HFS) found that malaria remains the leading cause of morbidity and mortality, accounting for about 42% of all outpatient consultations and 44% of all inpatient deaths among children under the age of five years. The Malaria Indicators Survey 2016 (MIS) showed a malaria prevalence (using mRDT) of 45% among children age 6-59 months, with

Malaria prevalence by Rapid Diagnostic Tests (RDT) in children under age five Years by region: 2016

regional variations from 12% in Greater Monrovia to 69% in South Eastern B.

#### U.S. Government contribution for malaria control in Liberia:

President George W. Bush launched the United States President's Malaria Initiative (PMI) program in 2005, with the goal of reducing malaria morbidity and mortality by 50% in PMI focus counties. The current PMI strategy (2015-2020) has a long-term goal of malaria elimination in select countries. In Liberia, the major donor for the national malaria control program is U.S. Government (USG) through PMI and the Global Fund. PMI support for Liberia National Malaria Control efforts started in 2008. With an annual budget of 14 million for the last four years, PMI has provided almost \$160 million from 2008 to 2019. Most of the support goes to procurement of malaria commodities—bed nets, malaria test kits, and malaria drugs.

#### **Achievements:**

The 2016 Malaria Indicator Survey shows that with USG and other donor support, Liberia is making progress towards malaria control. For example:

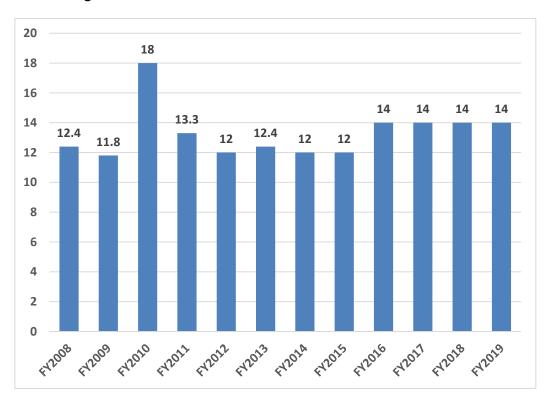

- Over 62% of Liberians own insecticide-treated mosquito net, an increased from the 2009 level of 47%.
- 44% of children under the age of five sleep under bed nets, an increase from 37% in 2009
- Over 50% of children running high temperatures were tested for malaria before treatment, an increase from 23% in 2009. A total of 81% of those with confirmed malaria get the appropriate recommended malaria drugs, an increased from 45% in 2009

- Approximately 55% of pregnant women receive at least two doses of the recommended drug that protect them and the unborn child from malaria infection
- PMI has worked with the Government of Liberia and donors to address the challenges in supply chain management. PMI Supported Liberia Ministry of Health to consolidate eleven National Drugs Services (NDS) warehouses into a single central new warehouse to improve storing and monitoring of commodities from multiple donors including USAID, UNICEF, UNFPA, WHO, MOH and Global Fund.

## **Challenges**

- Despite these gains, the malaria burden is still high in Liberia. Lifesaving interventions need to become accessible to all Liberians, not just those in urban areas or those with high incomes and education.
- Local communities need to use the available anti-malaria services, e.g. insecticide treated bed nets, testing for malaria and seeking care early, use high quality authentic drugs, and malaria prophylaxis until the end of pregnancy
- The Government of Liberia has to own and sustain the achievements made so far by contributing domestic resources to malaria control
- Liberia supply chain system is undergoing various reforms to ensure effective warehousing and last
  mile distribution of commodities. The reforms have ahoieved significant progress, especially in
  integrated warehousing of commodities. However, un-streamlined last mile distribution of
  commodities has resulted in chronic stock out of commodities even when they are available at central
  and county depots. Other supply chain gaps include lack of complete consumption data for proper
  quantification and ordering/resupply of commodities.

## PMI Funding in US Millions: FY 2008-2019

## Implementing Mechanisms/Partners:

Under USAID leadership and technical expertise from CDC, the following partners are implementing PMI-funded malaria control activities in Liberia:

Implementing Partner	Name of Program	Interventions/Activities
Peace Corps (USG)	Small Project Assistance Program (SPA)	Community education and promotion of bed nets use to improve use of malaria control interventions
Ministry of Health	Fixed Amount Reimbursable Agreement (FARA)	Malaria diagnosis and treatment; prevention of malaria in pregnant women
Jhpiego	Maternal and Child Survival Program- Expansion of malaria services ( MCSP-EMS)	Malaria case management (diagnosis and treatment), prevention of malaria in pregnant women, M&E support and data use. Closing in September 2019.
International Rescue Committee (IRC)	Partnership for Advancing Community- based Services (PACS)	<ul> <li>Integrated community case management of malaria, diarrhea, and pneumonia</li> <li>Social Behavior Change Communication</li> </ul>
Abt Associates	VectorLink	Vector Control: (Entomological Monitoring)- monitoring the behavior of vectors and entomological monitoring

John Hopkins University	VectorWorks	Vector Control; developing capacities for distribution of insecticide-treated bed nets in health facilities and monitoring the durability of bed nets. Closing September 2019
International	Alliance for Malaria	Technical Assistance for distribution of insecticide
Federation of Red Cross ( IFRC)	Prevention (AMP)	treated nets through mass campaigns
Chemonics International	Global Health Supply Chain-Pharmaceuticals Systems Management ( GHSC-PSM)	Procurement and distribution of commodities, including strengthening Liberia supply chain management systems
U.S. Pharmacopeia Convention ( USPC)	Program for Quality of Medicines ( PQM)	Monitor the quality of antimalarial drugs, including developing the capacity of Liberia Regulatory authority to monitor the availability and use of substandard and fake malaria drugs. Closed in mid 2019
University of North Carolina	Measure Evaluation-	Develop capacity of the National Malaria Control Program for monitoring and evaluation
ICF International	Liberia Malaria Indicator Survey	Conduct population-based survey to measure malaria outcome indicators like malaria prevalence rates, bed net ownership, access, and use; malaria testing, and use of recommended malaria drugs
